Experiment-11

Online super market

AIM

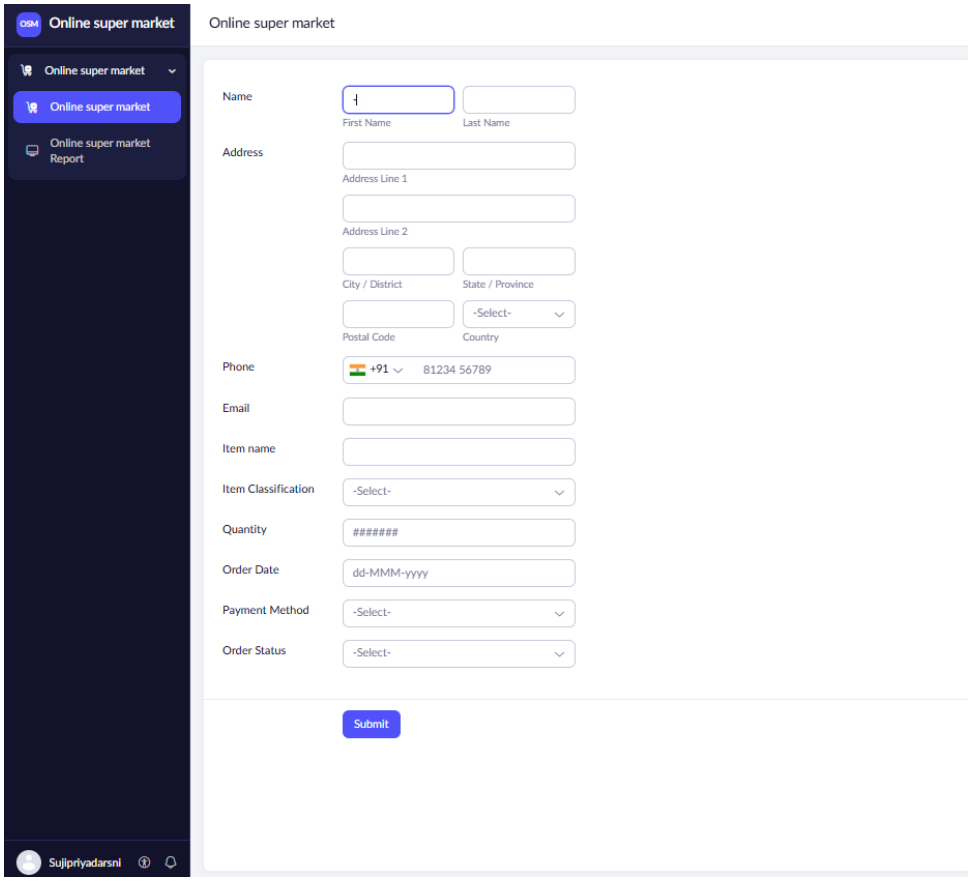

To create a simple Cloud-based Online Supermarket System using Zoho Creator to demonstrate the Software as a Service (SaaS) model and manage customer details, product information, quantities, and item classifications.

PROCEDURE

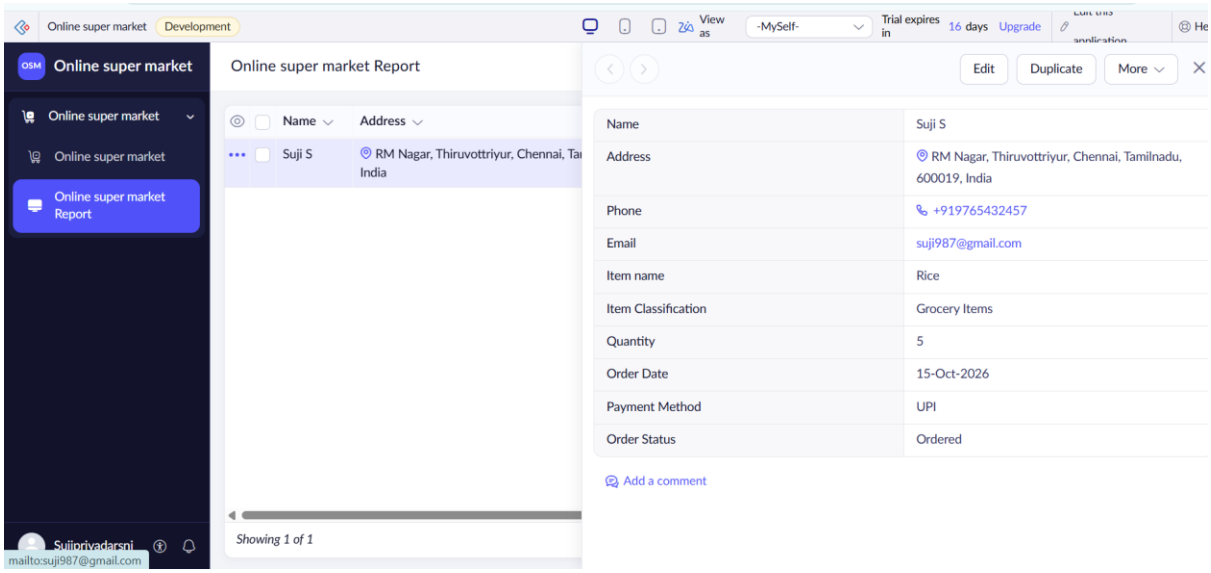

1. Open Zoho Creator and sign in to your account.
2. Create a new application named Online Supermarket System.
3. Create a blank form named Customer Details.
4. Add the fields Customer Name, Address, Phone, Email, Item Name, Item Classification, Quantity, Order Date, Payment Method, and Order Status.
5. Set Item Classification as a dropdown with Fruits and Vegetables, Grocery Items, Dairy Products, Beverages, Snacks, and Household Products.
6. Create another blank form named Item Classification.
7. Add the fields Category ID, Category Name, Category Description, Item Name, Brand, Price, and Available Quantity.
8. Configure the appropriate dropdown options for product categories.
9. Save both forms and enter sample customer and product details.
10. Create reports for Customer Details and Item Classification to display the stored records.
11. Test the application by entering sample data and viewing the reports.
12. Publish or share the application with the required permissions.
13. Access the application through a web browser to demonstrate the SaaS model.

IMPLEMENTATION:

INPUT:

OUTPUT:

RESULT

Thus, a **Cloud-based Online Supermarket System** was created using Zoho Creator. The application manages customer details, product information, quantities, and item classifications through cloud-based forms and reports, demonstrating the **Software as a Service (SaaS) model**.
